

## **Enhanced Features Newly Added to LogiNet Standard on Internet**

With the latest released LogNet upgrade patch version 1.6.07/1.6c.06, you can enjoy a number of enhanced features in LogiNet Standard:

**1. Search Cargo Manifest by Last Modified Date and User ID**

Users can now search Cargo Manifest simply using the “Searching criteria” to specify the day range of the “Last modified date” and/or the “Last modified user”. If you leave the “Last modified user” box blank, all the cargo manifests modified by all users will be displayed.

**2. Updating License Information by Batch**

**[Batch Update]** button is newly added in Cargo Manifest Master Information to enable users to **[Add]** or **[Change]** the “Licenses / Notifications / Supporting Documents Ref. No.” by batch.

**3. Import Interface Flat File by Batch or User ID**

Users can click **[Add]** in the “Import Flat File” form to browse the location folder in order to select more than one EMAN XML messages. The selected file(s) will then be moved to the LogiNet’s import directory automatically. A new column “User” in the import queue list shows the user who has added the files.

**4. Automatic Update of Container Number into the “Container Details” Field**

Users no longer need to repeat entering the same container number in the equipment and container details field. When users insert/edit a container number in the “equipment details” field (under the cargo item), the new container number(s) will be automatically copied to the “container details” field (under cargo manifest). However, if users delete/edit the container number in the “equipment details” field (under cargo item), the original container number being deleted/edited will not be changed in the “container details” field (under cargo manifest) automatically; users have to update the relevant container number manually.

**5. Enhanced Searching Flexibility for Government Query**

Users can now search Government Query by specifying a date range in the new “Query Date” field. With another newly added searching “I/O Bound” field, users can select “Inbound”, “Outbound” or leave the field blank to display inbound, outbound or both types of Government Queries at the same time.
